Eson Pac invests to increase efficiency and capacity for cartons

Over the past 18 months, Eson Pac has invested heavily in both label and leaflet production. This positive development continues with an additional investment in a new Rapida 106 X from Koenig & Bauer, for the carton production.

“By installing this 7-colour printing press in our plant in Veddige, Sweden, we increase our flexibility and printing capacity. Since a few years back, we already have several Koenig & Bauer presses up and running in Veddige. This new machine, which is replacing one in another brand, with the same platform and setup as the others creates great benefits and synergies. Rapida 106 X is state of the art and “fit for the future”, with extended technological solutions for highest productivity. This is ideal for us and our customers, and a natural step for Eson Pac when continuing our dedicated focus to provide solutions for the Pharma Industry. Additionally, by investing in new technology we reduce our CO2 footprint by lowering the energy consumption, which is very important from a Sustainability point of view”, says Pierre Åkesson, COO at Eson Pac.

“To be the owner of the best production equipment on the market for all our production segments enables us to further improve our service levels and secure a safe supply chain”, Pierre Åkesson ends.
